

- GET / -> Renders the home page
- User authentication routes
 - GET /login -> Renders the login view
 - GET /logout -> Logs the user out and redirects to / route
 - GET /user/drivers -> Renders the drivers page
 - GET /routes -> Renders the routes page
- POST /drivers/assign-route -> Assign one particular route to one driver

Installation

(Note : These instructions are only for developers/testers for now)

1. Open git bash or cmd
2. Clone the repo:

```
git clone https://github.com/Bucephalus-lgtm/Poriskar
```

3. Change to the **Poriskar** directory

```
cd Poriskar
```

4. Since the operational code is in the **admin-backend**, and the current branch is **master**, checkout a tracking branch pointing to the **admin-backend** of the remote repo (changes will get pulled automatically)

```
git checkout origin/admin-backend
```

5. Open your git bash or cmd again, and cd to the **Poriskar** directory. Then

```
npm install
```

After all packages have gotten installed,

```
npm run dev
```

Web app will be accessible at localhost:3000
